## SPRAY PLASTER

### ACRYLIC CEMENT TEXTURING MEDIUM

#### CEMENTITIOUS HOPPER GUN TEXTURE POWDER

**DESCRIPTION:** An acrylic polymer / cement mixed dry powder blend that features adhesion, low build curing and wet consistency necessary to routinely achieve bold, Hopper Gun applied texture effects as used extensively on fibrous cement, polystyrene and cement plaster building exteriors.

- ❑ Water based for ease of use and cleanup.
- ❑ Extremely economical, and a favoured bold texture finish effect in both domestic and commercial building practice.

#### **TYPICAL PROPERTIES:**

**Specific Gravity:** 1.8 mixed

**Packaging:** 25 kg paper bags

**Shipping Weight:** 25 Kgs.

**Shelf Life (unopened bottles):** Minimum 12 months.

**Mix Ratio:** Mix at rate of one bag 20 kg to approximately 3 litres of water - experiment to find the mix that suits the particular equipment and appearance requirement from fine to bold.

**Effective Volume Solids:** 95% (Mixed product)

**Texture Spread Rate:** Varies with pattern but about 20 m<sup>2</sup> per bag mix.

**Appearance:** Highly thixotropic wet mix, low gloss grey mass when cured.

**Safety:** Non-flammable. Wet material is alkaline  
-avoid eye and skin contact.

**APPLICATION:** Add **SPRAYPLASTER** powder to clean, potable water while stirring - Mechanically mix with heavy-duty drill until uniform and flowing. Apply by hopper gun adjusting aperture and pressure to spray effect required - typically 7mm and around 10 PSI.

#### **IMPORTANT NOTE**

This product as supplied by **Construction Products Limited** is warranted to conform to those physical properties listed in the Typical Properties section of this information sheet. Otherwise the information presented including that on suggested areas and methods of use is in good faith only and is specifically without recommendation or guarantee as to particular suitability. It is the responsibility of the purchaser to satisfy itself that the product is both fit for the purpose intended and that their use of the product can and does achieve that purpose in any particular instance or condition. Usage rates are presented as an initial guide only and do not account for wastage or substrate or build variations.
